EHB326E – Assignment N Report

Assignment Title

Full Name (Student ID)

October 2, 2026

1 Abstract

Briefly describe the purpose of the design, the method used, and the verified results. Do not include unmeasured success or performance figures.

2 Objective and Requirements

State the objective and requirements of the assignment.

3 Method and System Design

If necessary, explain the system components and data flow. Adapt the diagram below to your own design.

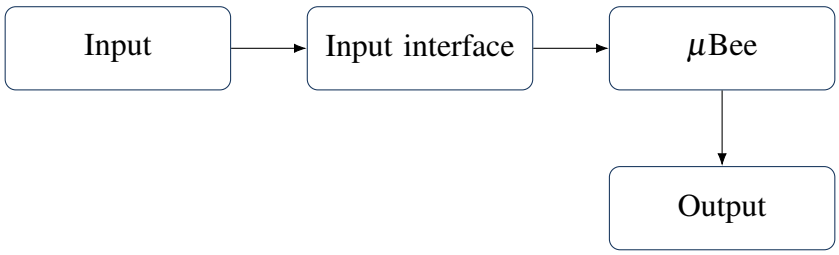

Figure 1: Example system flow; update it to reflect the actual implementation.

3.1 Implementation

Do not paste code into the report. Explain the functions, inputs and outputs, timing, and design choices of the important modules; keep the source files separate in the submission package.

4 Simulation and Findings

Provide the test conditions, applied inputs (do not include code), expected behavior, and observed output. Refer to each figure in the text and interpret the results.

Table 1: Test and observation records

Test	Input / condition	Expected result	Observed result
1	[Fill in]	[Fill in]	[Fill in]
2	[Fill in]	[Fill in]	[Fill in]

5 Verification and Evaluation

Clearly state whether the design works correctly, which expected results were achieved, and any limitations. Support your evaluation with Table 1.

B

6 Conclusion

Briefly summarize the results obtained and the extent to which the design meets its objectives.
